

week-8

JX-Ma

2024/9/14

1 INTRODUCE

This week's work mainly focused on optimizing the im2win change algorithm in the early stage, and continued to work on GPU in the later stage. I have compiled CUDNN for various algorithm versions. However, when I wanted to test the data, there were no problems in the first few attempts. Later, it may have been a server issue that caused me to submit assignments without job logs and ended in a short period of time, so this week's data is incomplete. I have organized the algorithm data from the previous few completed tests.
